

FaithStream Content Strategy

A strategic roadmap for strengthening FaithStream's acquisitions, original productions, programming and content operations over the next ninety days.

Objective

The focus for the Content Team is to strengthen FaithStream's content ecosystem by improving acquisitions, accelerating original content development, establishing a consistent unscripted programming schedule and building the systems that will allow the platform to scale sustainably.

Rather than focusing purely on increasing the volume of content, this strategy prioritises quality, consistency and collaboration, ensuring every piece of content strengthens FaithStream's position as the home of African faith-based storytelling.

What does success look like?

Success will not be measured simply by the number of titles published or projects started. It will be measured by whether the Content Team has built stronger systems that can consistently support the platform's long-term growth.

FaithStream should have:

- A more predictable acquisition pipeline.
- A prioritised and investment-ready original slate.
- A consistent rhythm of unscripted programming.
- Stronger operational workflows.
- Improved collaboration between Content, Product, Marketing and Technology.
- The initial foundations for a future FaithStream Creator Network.

The ultimate objective is for the Content Team to move from responding to individual projects towards operating as a connected content department—one that consistently discovers, develops, produces and publishes African faith-based stories with excellence.
